

Sit Up

"Deconditioning syndrome is the condition of physical, psychological and functional decline that occurs as a result of a series of complex physiological changes induced by prolonged bed rest or inactivity. It is commonly experienced by older people in a hospital or care home setting. Though deconditioning can affect people of any age, the effect on older people may be more rapid, more severe, and often irreversible" - Dr Amit Arora

Get Dressed

Keep Moving

Preventing deconditioning and enabling independence for older people

Assess

A comprehensive assessment should be completed to determine usual capabilities

A risk assessment should be completed

Glasses, hearing aid, clock and calendar should be accessible

Support

Are there appropriate mobility aids available?
Ask: Is it the right size and reachable?

Walking to the toilet helps to prepare for going home.
Ask: Is the catheter really needed?

Sitting in a chair can help you.
Ask: Do you need help getting out of bed?

Encourage

Feed and take fluids independently

Wash and dress independently in own clothes

Keep arms and legs moving, even in bed or on a chair
