PROGRAM PREFERENCE:			
<u>Geriatric Mental Health Team</u> Geriatric Psychiatrist + interdisciplinary team - MD/NP referral required <u>Geriatric Medicine Team</u> Interdisciplinary Team only (RN/OT/etc) - not a/v in all regions ☐ <u>GeriMedRisk (GMR)</u> MD/NP referral required ☐ Unsure, help me find the best service		☐ <u>Seniors C.A.R.E. Exercise Program</u> Confirmed has physical tolerance and cognitive ability to participate in group setting for both rehab and education/cognitive stimulation (1.5 h per class, up to 24 classes). Note any restrictions / considerations above.	

Please include the following for specialist MD/NP referral - if not complete within past last 6 months please order:

CBC, Iytes, Cr, Ca, TSH, Alb, B12
Cumulative Patient Profile (CPP)

ECG, CT/MRI, BMD
Current Med List

Previous cognitive tests
Consult/Specialist Reports

Services Available Through NSM SGS Central Intake

Geriatric Mental Health: Behavioural Support Interdisciplinary Team	Behavioural management teams for community and LTCH provide specialized behavioural assessments, care planning, non-pharmacological interventions. Typical concerns: older adults experiencing expressive/responsive behaviour as a result of a cognitive impairment that can be related to neurocognitive disorder, mental illness, addictions and/or other neurological disorders.
Geriatric Mental Health: Geriatric Psychiatry <i>*MD/NP referral required</i> <u>Please note:</u> - We do not accept referrals where the primary reason is for addiction services - We do not provide counselling services - Older adults without significant frailty may also be served by general psychiatry	Consultation service that provides comprehensive geriatric assessment and treatment recommendations for older adults living with complexity and frailty who are experiencing symptoms of serious mental illness. Typical concerns: - Serious Mental Illness diagnosis/treatment (major depression, anxiety disorders obsessive compulsive disorder / post traumatic stress disorder, bipolar disorder, schizophrenia) in an older adult living with frailty (CFS 4-6) - Diagnosis/management of neurocognitive disorder with prominent behavioural symptoms as the primary reason for consultation (e.g., behaviour variant frontal temporal dementia, dementia with prominent agitation, psychosis) - Consultation requesting diagnostic clarification for cognitive impairment in the setting of comorbid psychiatric illness
Geriatric Medicine <i>*MD/NP referral required</i>	Provides medically complex older adults with comprehensive geriatric assessment, diagnosis, treatment, and follow-up. Typical concerns: - Chronic complex medical issues ± cognitive impairment, geriatric syndromes - Neurocognitive disorder diagnosis/management (especially in the setting of Parkinson's Disease/Parkinsonism, atypical presentation, complex comorbid medical issues) - Presence of other geriatric syndromes – falls, bone loss, continence, delirium, movement disorders, polypharmacy, frailty
Seniors C.A.R.E. Exercise Program <i>*Referrals accepted from MD, NP, Regulated Health Professional</i>	A congregate rehabilitation program providing 1 hour seated or standing exercise followed by 30 mins. education/cognitive stimulation per class. <u>Eligibility criteria:</u> Older adults Clinical Frailty Scale 4-6; Risk of and/or experiencing functional loss with the potential to retain/regain some or all functional ability <u>Expectation</u> that participants will attend class twice weekly for up to 24 classes and able to arrange transportation
GeriMedRisk <i>*MD/NP referral required</i>	An interdisciplinary team with expertise in pharmacy, geriatric psychiatry, clinical pharmacology and geriatric medicine that provide support in managing medication/physical/mental health issues in older adults. GeriMedRisk specialist physicians do not see the patient over phone or video, but rather provide recommendations based on the information provided. Where appropriate, GeriMedRisk conducts a best possible medication history via phone with the patient/caregiver.

Specialized Geriatric Services do not offer assessments for legal purposes such as capacity assessments or on-road functional driving assessments.

For early onset cognitive impairment (i.e. <60yrs): Consider referral to a [specialized memory clinic](#).

Clinical Frailty Scale (Rockwood *et al.*, 2005)

1-3. Not frail – May have multi-comorbidity but manages independently - Consider health promotion/chronic disease management approach

4. Very Mildly Frail - Multi-comorbidity with symptoms of slowing down/changing lifestyle to support independence

5. Mildly Frail - Requires support with IADLs

6. Moderately Frail - Requires support with IADLs and some ADLs

7-9 Severely Frail to Terminal– Completely dependent for all IADLs/ADLs – may be seen by Geriatric Mental Health Behavioural Support Interdisciplinary Team for Behavioural & Psychological Symptoms of Dementia – BPSD.
